### ***Circular Electro-Permanent Magnetic Chucks***

***Close pole Design***

***Solid one piece Steel body construction***

***Brass and Steel Top plate***

***Variable power***

***Balanced***

***Available in any size***

The PM80 range of Electro-permanent magnetic chucks offers the highest accuracy and controlled power available. The dense pole configurations give maximum grip on even the thinnest work pieces.

The fail safe design of electro-permanent chucks mean there is now loss of magnetism even in the event of total power failure.

The Electronic control system is available in internal or external mounting versions and has optional digital remote control. For increased safety the unit is plc compatible allowing integration into the machine control system to prevent accidental machining with the chuck switched off.
