

Magnetic Systems Ltd

Demagnetisers

Platen Type

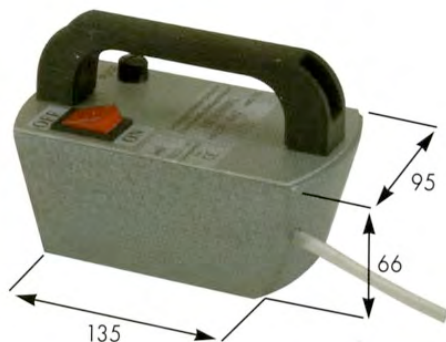

DE20.0002/3/4

DE20.00001

The DE20 range of demagnetisers are designed to eliminate unwanted magnetism in a wide range of components tools etc. The electromagnetic fields generated alternate at a high frequency which will remove residue and induced magnetism in the work-piece as it is passed across the surface of the unit.

Type	A	B	C	Volts	Watts	Kg	Price £
DE20.00001	200mm	170mm	70mm	240	150	3.2	£185.00
DE20.00002	225mm	200mm	125mm	240	220	20	£385.00
DE20.00003	375mm	200mm	125mm	240	440	32	£450.00
DE20.00004	525mm	200mm	125mm	240	700	46	£552.00

Excludes VAT and carriage

DE10 The DE10 is a portable demagnetiser that can be used to demagnetise components that can not be moved to a conventional demagnetiser. Simply by sliding the unit over the magnetised piece will remove magnetic residue in the component. Efficiency is reduced on components with large ferrous mass.

Type	Volt	Watt	Kg	Price £
DE10.00001	240	40	3.7	£175.00

Excludes VAT and Carriage
